“Offering verifiable success in developing mobile and web applications.”

Monash Software Engineering Graduate with experience in developing software solutions gained through industry projects and internships. Skilled in understanding customer requirements and finding the right technology. Demonstrated excellent professional communication skills through presentations and teamwork.

Technically competent and experienced Software Developer with over 4 years of demonstrated strengths and success in application design and development in web and mobile environments. Skilled in solving complex programming issues and project implementation. Sound knowledge of the software development life cycle (SDLC) – business requirement assessment, design, development, testing, and deployment. Exceptional analytical, problem-solving, communication, and teamwork skills. **Experience & Strengths in:**

High Technical Aptitude	Problem Identification, Solutions Development
Technical Communication	Client Training & Support
Project Coordination and Management	Code Testing, Quality Assurance
Administration	Software Improvements & Enhancements

►►► **Qualifications** ◀◀◀

Master of Information Technology, Monash University

Mar 2024 - June 2025 (Ongoing)

Key subjects: Project Management, Cloud Computing, Distributed System etc.

Bachelors of Software Engineering (Honours), Monash University

Mar 2019 - Oct 2023 (Average Grade: HD)

Key subjects: Software Architecture, Object Oriented Programming, Mobile & Web Development, Software Engineering Process, Software Quality, Security and Testing etc.

►►► **Technical Portfolio** ◀◀◀

Mobile Application (Android)	Kotlin, Jetpack Compose, XML, (Cross-platform: React Native).
Web Application	React.js, Vue.js, Typescript, JavaScript, CSS/HTML
Programming Languages	Java, Python, C.
UI/UX Design	Figma, Usability and accessibility design.
Data Visualisation	Tableau, Vega/Vega-lite.

▸▸▸ IT Industry and Internship Experience ◀◀◀

Web Frontend Developer (vacation intern), Zheng Feng IT, China

Sep 2020 - Oct 2020

Tech Stack: Vue.js, element-Ui.

Participated in the development of a web app for an airworthiness directive information system tailored for airlines, learning and utilizing Vue.js-based framework technologies to develop the pre-designed prototypes. As a member of a team comprising four senior employees, attended project meetings, collaborated with the team, and worked in synergy with teammates under the leadership of the team leader. Independently designed and developed a personnel management platform.

Group Project (Developer & Tester), Monash University

Mar 2023 - Oct 2023

Worked on a group project as part of Bachelors in Software Engineering. The project name is Intake.

Tech Stack: React Native Expo, Typescript, Redux.

Project brief: Intake is a Mental Health Triage App for Clinicians aimed at streamlining and optimizing the traditional triage process. The project has currently been incorporated into HUMANISE LAB for further study.

As a developer and tester, I performed following tasks:

- Developed all functionalities and interfaces related to the admin role, such as exporting patient data files, managing employee and patient information, and account management.
- Independently conducted testing for the entire Android version of the application, identifying several functional and non-functional deficiencies and successfully addressing them.
- Rectified several non-functional bugs affecting multiple platforms.
- Solely responsible for conducting model tests for the entire application, achieving a test coverage of 100%.

Research Group Project (Leader), Monash University

Mar 2023 - Oct 2023

Worked on a research group project as part of Bachelors in Software Engineering. The research question is "Is ChatGPT capable of multi-platform testing?"

Tech Stack: Python, UI automator, ADB, Selenium, OpenAI API, prompt-engineering and research.

Project brief: The project aims to research methods for enabling ChatGPT to perform cross-platform test migration, as well as evaluating the feasibility of various approaches and models, under the supervision of Sidong Feng and Chunyang Chen.

As a leader, I performed following tasks:

- Led a software engineering team in researching Prompt Engineering for ChatGPT, managing tasks, facilitating communication, and contributing significantly to project outcomes.
- Collaborated with team members, employing Python, UI automator, and OpenAI API to develop an automated cross-platform test conversion tool.
- Initial research findings suggested potential time savings of approximately 50% for cross-platform testing under specific conditions.

Individual Project (Personal)**Mar 2023 - Oct 2023**

Independently designed and developed an Android currency exchange rate application named Acurrency.

Tech Stack: Kotlin, XML.

Project brief: Acurrency is a currency exchange rate application designed for the Renminbi (RMB) and other foreign currencies. It aims to provide real-time and accurate foreign exchange rates based on bank data, offering precise and timely information for currency trading.

I performed following tasks:

- Designed and developed a mobile application for Android independently, incorporating UI interfaces, gesture recognition, and data retrieval from public sources.
- The application underwent limited-scale testing and received positive feedback upon publication on the Google Play Store.

Individual Project (Personal), Monash University**Mar 2023 - June 2023**

I developed an iOS app named C-Money, which is designed for tracking income and expenses.

Tech Stack: Swift.

Project brief: C-Money is an iOS application that allows users to record their income and expenses and visualize them. Its features include login system, biometric authentication, geolocation, deposit planning, theme switching, etc.

I performed following tasks:

- Conducted research and feasibility evaluations, adhering to Apple's design guidelines to create high-fidelity app interface mock-ups.
- Developed software functionalities including a login system, facial recognition, and geolocation using Swift and related libraries, achieving a score above 90 points (out of 100).

Large-scale Team Project (Developer & RTE), Monash University**Mar 2022 - Oct 2022**

Completed a project comprised of 20 individuals, developing an Android application named "Teach me Talkback".

Tech Stack: Kotlin, XML, Google Accessibility.

Project brief: The project aims to provide visually impaired individuals with intuitive, highly interactive, and engaging tutorials based on Google Talkback, thereby helping them better utilize smart devices.

As RTE and Developer, I performed following tasks:

- Efficiently managed agile teams based on the SAFe framework, facilitating the success of the project.
- Learned Kotlin and Google's accessibility features, contributing to the development of application functionalities, such as course design, module implementation, notification pushing, and partial gaming elements etc.
- This project later became the template for the course and was taken over and further developed by subsequent students.
